

# MENEHUNE AI, LLC

Capability statement · SDVOSB AI and software development, built and operated in-house

---

Menehune AI, LLC designs, builds and operates custom AI systems. Eight are shipped and running; three of them are built on federal data and federal forms — solicitation capture, background-investigation packets, and credential verification against federal registries. We are an SBA-certified Service-Disabled Veteran-Owned Small Business, eligible for set-aside and sole-source award.

## AT A GLANCE

|                        |                                                                |
|------------------------|----------------------------------------------------------------|
| Legal name             | Menehune AI, LLC                                               |
| Entity type            | Limited liability company                                      |

Anything above that we have not published yet is sent by return email, usually the same day. Everything we have published can be checked against our entry in SAM.gov and in SBA's small business search under the legal name — do not take our word for any of it.

## CORE COMPETENCIES, MAPPED TO SHIPPED SYSTEMS

### Federal capture and proposal support

Daily scan of government solicitations, scored against a firm's set-asides, codes and past work, then carried through triage, capture, teaming and a drafted proposal. Every generated artifact waits on a human approval before it goes anywhere.

Built as: [AI Federal Capture — 693 federal notices scored · 32-table pipeline](#)

### Background-investigation and onboarding packet automation

Reads a candidate's government ID, fills the background-investigation and employment declaration forms, then re-scans the returned PDFs and reports exactly what would get a packet rejected. A second board tracks each hire from offer through fingerprinting, training and badge pickup.

Built as: [Security Packet Automation, for federal contract staffing — 219 form fields mapped across 5 federal forms](#)

### Credential and licence verification against federal registries

Reads uploaded licences, certifications and immunisation records, checks each one against federal and state registries, keeps them under watch as they change, and auto-fills the long application for signature.

Built as: [AI Clinical Credentialing — 10 verification sources · 358-field application auto-filled](#)

### Document and form automation

The common engine underneath the three above: turn a scanned document into structured facts, fill a long form from them, check the result against the rules that decide whether it is accepted, and route it for signature. Long federal forms are the hard case, and the case we built for.

Built as: [shared across the credentialing, packet and intake systems — 219 form fields mapped across 5 federal forms · 730 leads staged · 576 matters reconciled](#)

## PAST PERFORMANCE, BY SECTOR

### Federal contract staffing

Background-investigation and employment declaration packets built from a candidate's ID, checked back against the returned PDFs for the defects that get a packet rejected, with an onboarding board from offer through badge pickup.

[219 form fields mapped across 5 federal forms](#)

## Health system credentialing

Credential wallet, verification against federal and state registries, continuous monitoring as licences change, and a state credentialing application auto-filled for signature.

[10 verification sources](#) · [358-field application auto-filled](#)

## GovCon business development

Daily solicitation scan and scoring against set-asides and codes, carried through triage, capture, teaming and a drafted proposal, with a human approval gate on every generated artifact.

[693 federal notices scored](#) · [32-table pipeline](#)

Client names are under non-disclosure. We will not print them, and we will not print a logo we have no right to. Where a client agrees, we will put you on a call with them.

## HOW AGENCIES CAN BUY FROM US

### SDVOSB set-aside — FAR 19.14

Competition restricted to certified SDVOSBs. We are certified, so an award to us counts toward the agency's SDVOSB goal and toward a prime's subcontracting goal.

### Sole source — FAR 19.14 · VAAR 819.7008

Governmentwide, a contracting officer may award an SDVOSB sole-source contract up to \$5 million (\$8.5 million for manufacturing) where only one certified SDVOSB is expected to be responsive and the price is fair and reasonable. At VA, VAAR 819.7008 permits a sole-source award up to \$5 million and does not require a determination that only one firm can perform.

### Subcontract or team with a prime

We take subcontracts and we team. Since the FY2024 NDAA, only SBA-certified firms count toward a prime's SDVOSB subcontracting goal — so our certification is worth something on your side of the ledger too.

Any contract vehicle we hold is listed in our SAM.gov record. We do not claim vehicles here that we cannot show you.
